

PAX RKI Download Instructions

- **PAX Android**

- If your device does NOT have Datacap skip to step 3

1. When the unit is at the “Welcome” screen swipe up from the bottom of the screen. You will see a bar appear at the bottom of the screen with a back arrow on it. Double tap this arrow quickly. This will bring up a password prompt.

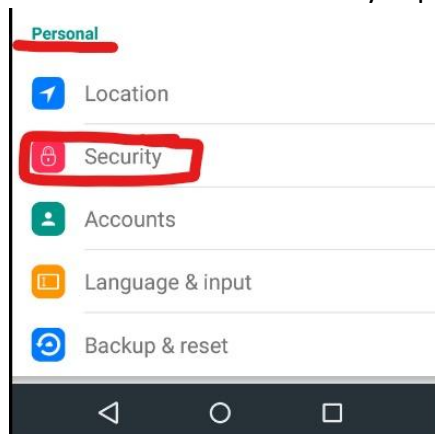

2. Enter the password “pax9876@@” and press “OK”. Once done, you will be at the desktop of the Pax device.

3. Navigate to “Settings”.

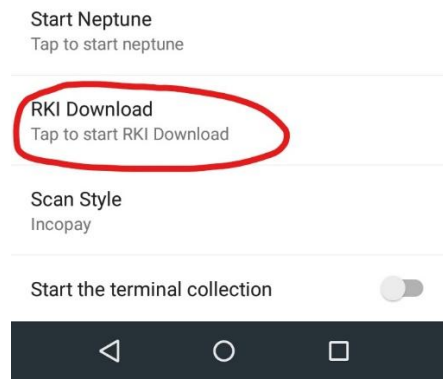

- Default settings password: pax9876@@

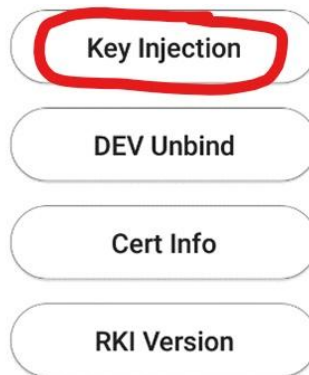

4. Scroll down and select the “Security” option.

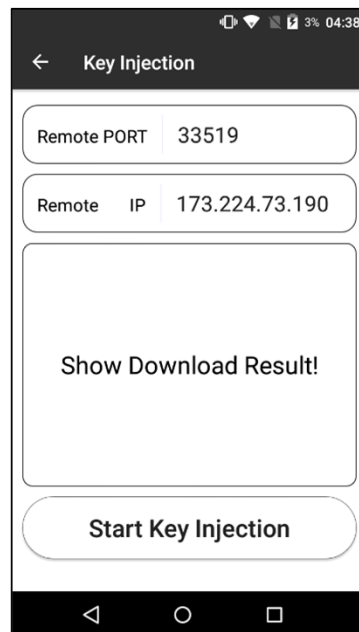

5. Scroll down and select “RKI Download”.

6. On the next menu that pops up, please select Key Injection.

7. Select Internal PED
8. On the next screen, please make sure the values match what you see in the image below and then select “Start Key Injection”.

9. If the RKI was a success, the device will display “Download Success”.

Please note that if you get any other message besides “Download Success”, please take a photo of the error and contact our technical support department at deployment@newboldcorp.com.
